RUNPOD PROOF OF USE

SME Smart | Team CTRL + Future | SDC Hackathon

1. Serverless endpoints running our models

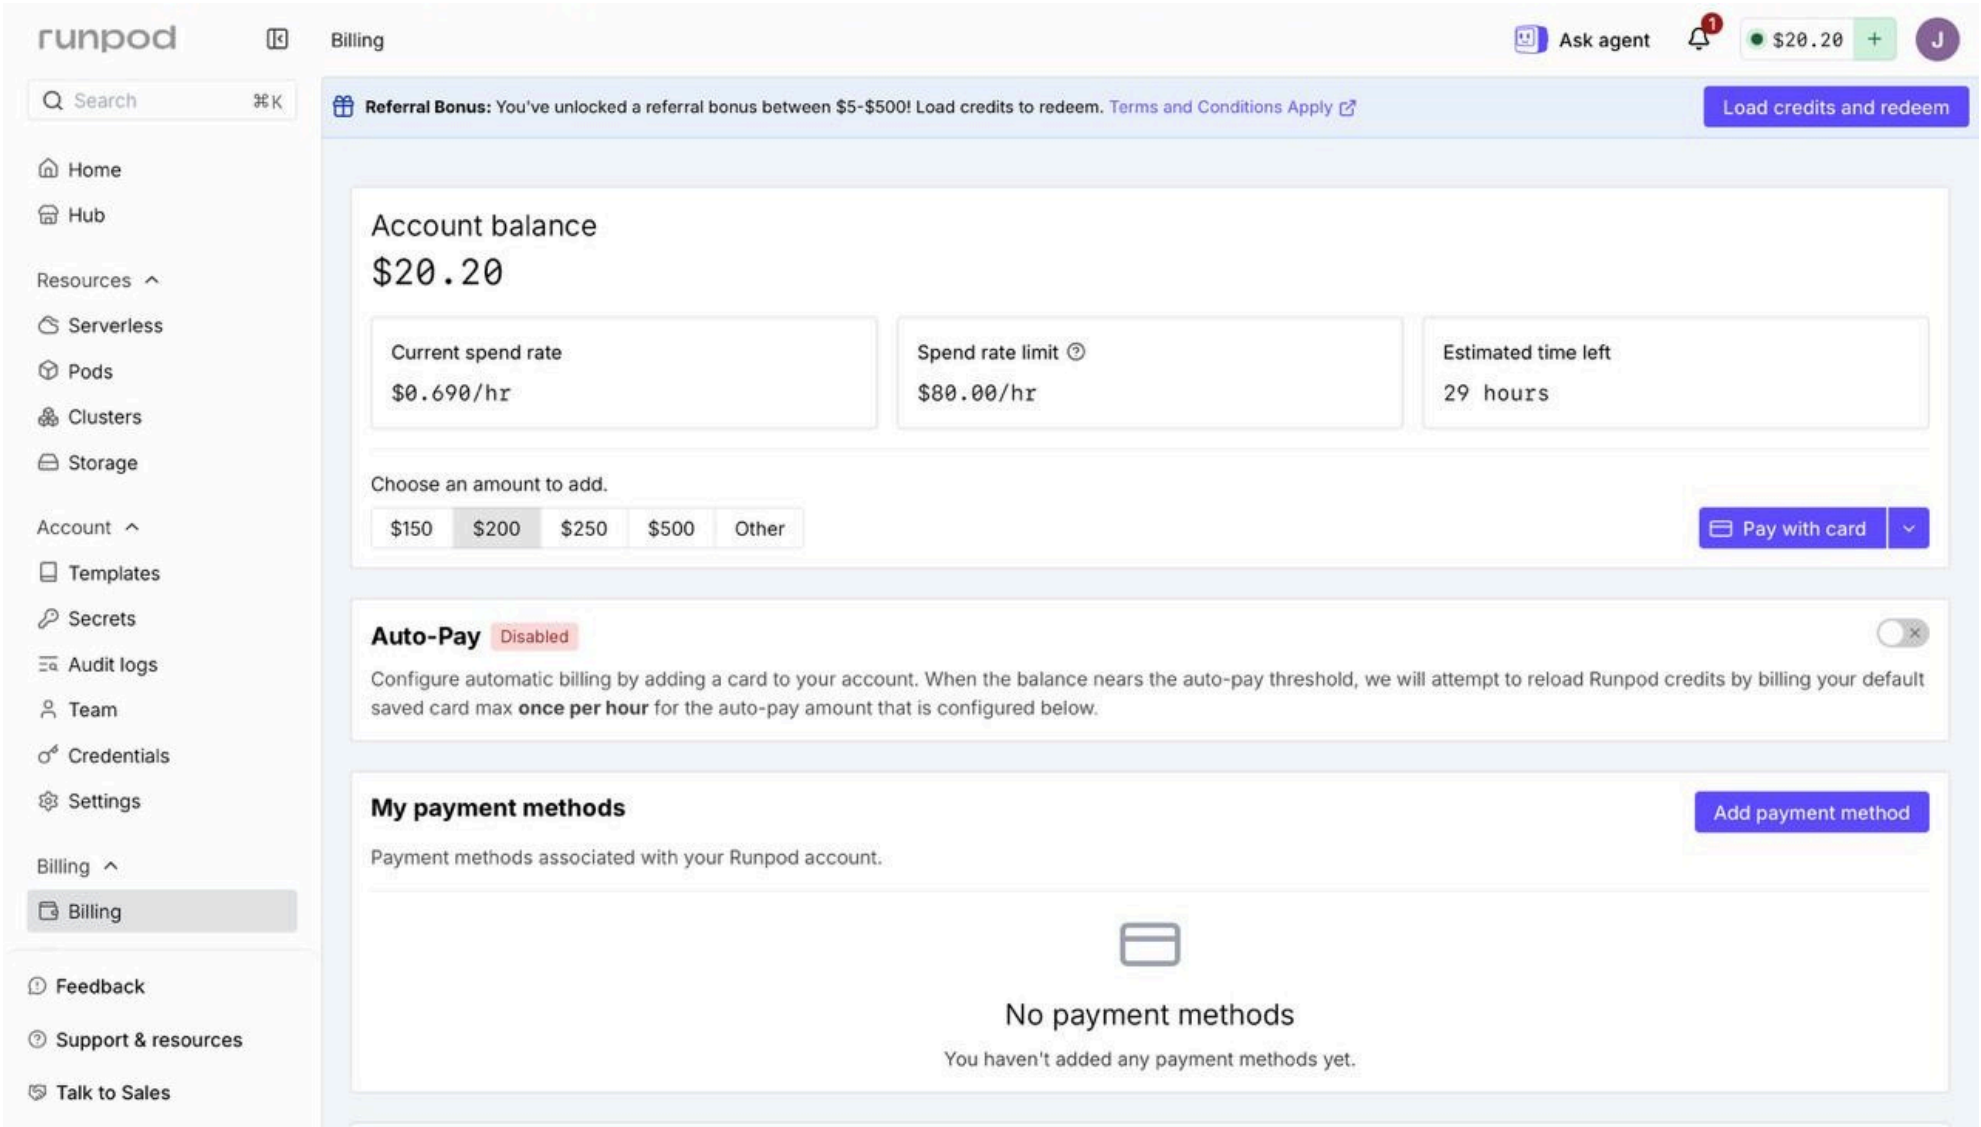

Our RunPod Serverless endpoints: vLLM Qwen2.5-VL-7B-Instruct (80 GB GPU) and qwen2.5-7b-instruct-vllm (24 GB GPU, 1 worker running). SME Smart calls RunPod through its API (src/Services/TextAiService.php) for AI text generation, such as writing assistant SOPs.

2. GPU usage and billing

Billing page of the same account: GPU workers are billed while they run (current spend rate $0.690/hr, account balance $20.20).
